A SEASONAL UPDATE FOR OUR VALUED ELECTRICITY & NATURAL GAS CUSTOMERS

Indoor Plants Can Help Reduce Heat and Save Electricity

Aside from adding a refreshingly natural touch to your interiors, indoor plants also help you save money. How do plants reduce temperatures? The answer lies in the additional layer of insulation which they create. This layer helps to maintain comfortable, cool temperatures by providing an extra level of protection from outside heat sources.

The cooling effect of house plants reduces energy costs and corresponding bills by lowering indoor temperatures. During the summer, they keep your home cooler and improve indoor air quality. By doing so, you can reduce your dependence on cooling devices that can breed bacteria and cause allergic reactions.

Heat Reduction by Plants: How Do They Work?

A plant's leaves release moisture into the surrounding air, which cools it and purifies it. It is estimated that by releasing moisture into a warm room it will lower the temperature by almost 10 degrees.

Customer only self watering plant spike

As a valued Agway Energy Services customer, you have the opportunity to claim our branded self watering plant spike. Simply fill out the form by visiting our website at agwayenergy.com/plant-helper/ or scan this QR code.
